

Wetlands Applications Decision Report

Decisions Taken
03/16/2020 to 03/22/2020

DISCLAIMER:

This document is published for information purposes only and does not constitute an authorization to conduct work. Work in jurisdiction may not commence until the applicant has received a posting permit.

Decisions are subject to appeal, and are reviewed by the federal agencies for compliance with Section 404 of the Federal Clean Water Act.

APPEAL:

Any party aggrieved by a decision may file an appeal within 30 days of the date of this decision as specified in RSA 482-A:10, RSA 21-O:14, and the rules adopted by the Wetlands Council, Env-WtC 100-200.

The appeal must be filed directly with the Council, c/o the Council Appeals Clerk, who may be contacted at (603) 271-6072 or atappeals@des.nh.gov. The notice of appeal must set forth fully every ground upon which it is claimed that the decision complained of is unlawful or unreasonable. Only those grounds set forth in the notice of appeal can be considered by the council.

MAJOR IMPACT PROJECT

2014-03557

AUDREY K FITZGERALD REVOCABLE TRUST

GILFORD LAKE WINNIPESAUKEE

Requested Action:

Request permit time extension to remove 1,099 sq. ft. of fill used in the construction of two breakwaters and the associated cantilevered piers. Reuse 640 sq. ft. of fill to construct a 40 linear ft. straight breakwater with a 6 ft. gap at the shoreline and a 4 ft. x 35 ft. cantilevered pier to be connected to a 4 ft. x 30 ft. crib pier and a 4 ft. x 28 ft. crib pier by a 6 ft. x 31 ft. walkway along the shore in a "W" configuration; install a permanent boatlift with a 14 ft. x 30 ft. seasonal canopy; a seasonal boatlift; and 2 seasonal personal watercraft lifts on an average of 246 ft. of frontage along Lake Winnepesaukee, in Gilford.

Conservation Commission/Staff Comments:

01/02/15 Con. Com. requests a "hold" until they can review the application at their next scheduled meeting and, potentially, they may complete an on-site inspection.

01/09/15 Con. Com. released "hold" and recommended approval with the conditions that this shall be the only structure on the frontage and that normal erosion and siltation controls are in place.

APPROVE TIME EXTENSION

Remove 1,099 sq. ft. of fill used in the construction of two breakwaters and the associated cantilevered piers. Reuse 640 sq. ft. of fill to construct a 40 linear ft. straight breakwater with a 6 ft. gap at the shoreline and a 4 ft. x 35 ft. cantilevered pier to be connected to a 4 ft. x 30 ft. crib pier and a 4 ft. x 28 ft. crib pier by a 6 ft. x 31 ft. walkway along the shore in a "W" configuration; install a permanent boatlift with a 14 ft. x 30 ft. seasonal canopy; a seasonal boatlift; and 2 seasonal personal watercraft lifts on an average of 246 ft. of frontage along Lake Winnepesaukee, in Gilford.

With Conditions:

1. All work shall be in accordance with revised plans by Watermark Marine Construction dated February 15, 2015, as received by the Department on February 23, 2015.
2. This permit shall not be effective until it has been recorded with the County Registry of Deeds office by the Permittee. A copy of the recorded permit shall be submitted to the DES Wetlands Bureau by certified mail, return receipt requested, prior to construction.
3. Work authorized shall be carried out such that discharges in spawning or nursery areas during spawning seasons shall be avoided, and impacts to such areas shall be avoided or minimized to the maximum extent practicable during all times of the year.
4. These shall be the only structures on this water frontage and all portions of the structures, including the breakwater toe of slope, shall be at least 20 ft. from the abutting property lines or the imaginary extension of those lines into the water.
5. Appropriate turbidity controls shall be installed prior to construction, shall be maintained during construction such that no turbidity escapes the immediate dredge area, and shall remain until suspended particles have settled and the water at the work site has returned to normal clarity.
6. No portion of breakwater as measured at normal full lake shall extend more than 47 feet from normal full lake shoreline.
8. The breakwater shall not exceed 3 feet in height(Elev. 507.32) over the normal high water line(Elev. 504.32).
9. The width as measured at the top of the breakwater(Elev. 507.32) shall not exceed 3 feet. 10. All rocks or fill associated with the pre-existing breakwaters not used in the construction of the new structures shall be completely removed from the jurisdiction of the Department.
11. Photos showing that all construction materials have been removed from any temporary stockpile area shall be submitted to the Bureau upon completion of the docking facility.
12. All seasonal lifts shall be removed for the non-boating season.
13. Canopies shall be of seasonal construction type with a flexible fabric cover. The seasonal support frame shall be designed to be removed for the non-boating season. The flexible fabric cover shall be removed during all seasons of non-use.

14. The maximum size of cribs shall not exceed 6 feet long by 6 feet wide and of such height as necessary to support the docking structure above the water level.
15. Crib material shall be timber, concrete, or other material approved by the Department of Environmental Services, and of such size and spacing as necessary to completely contain the ballast.
16. The minimum clear spacing between cribs shall be 12 feet.
17. All activities shall be in accordance with the Shoreland Water Quality Protection Act, per RSA 483-B. The owner is responsible for obtaining any Shoreland Permit that may be required per RSA 483-B, for construction, excavation or fill that will occur within the Protected Shoreland.

With Findings:

1. The owner, authorized agent or applicant certifies that this permit qualifies for a permit extension in accordance with RSA 482-A:3, XIV-a(a), and Env-Wt 502.01.
 2. This permit has been extended in accordance with RSA 482-A:3, XIV-a(a) and Env-Wt 502.01.
- Send to Governor and Executive Council-

2015-00420

NH DEPARTMENT OF SAFETY MARINE PATROL

GILFORD LAKE WINNIPESAUKEE

Requested Action:

Request permit time extension for the purpose of replacing and upgrading NH Department of Safety, Marine Patrol facilities on Lake Winnepesaukee in Gilford:

- 1) Temporarily impact 170 sq. ft. of lakebed to install a 226 linear ft. cofferdam;
- 2) Dredge 68 cu. yd. from and otherwise alter 4,212 sq. ft. of lakebed;
- 3) Alter 246 linear ft. of shoreline; and
- 4) Reconfigure a major docking system.

Conservation Commission/Staff Comments:

2/25/15 Con Com requests a "hold" until they can meet to discuss the application and there may also be an on-site inspection.

2/6/15 Per DHR, Additional information is needed in order to complete review.

03/27/15 Commission voted to recommend approval with siltation controls to be in place and BMP's in place for the boat wash separator. See letter in file for other comments.

APPROVE TIME EXTENSION

For the purpose of replacing and upgrading NH Department of Safety, Marine Patrol facilities on Lake Winnepesaukee in Gilford:

- 1) Temporarily impact 170 sq. ft. of lakebed to install a 226 linear ft. cofferdam;
- 2) Dredge 68 cu. yd. from and otherwise alter 4,212 sq. ft. of lakebed;
- 3) Alter 246 linear ft. of shoreline; and
- 4) Reconfigure a major docking system.

With Conditions:

1. All work shall be in accordance with revised plans submitted by Vanasse Hangen Brustlin, Inc. dated May 12, 2015, and received by the NH Department of Environmental Services (DES) on May 13, 2015.
2. The DES Biology Bureau's Limnologist/Exotic Species Program Coordinator shall be notified in writing of the date on which dredging will begin 14 days prior to the beginning of the project.
3. If, at any time during the dredging, DES determines that rising water levels pose significant risk to the containment of the site, DES may request that the work cease until water levels recede to an acceptable level. Work shall cease immediately upon notification of the applicant, or any agent of the applicant, that water levels have risen to an unacceptable level, and shall not resume until authorized by DES.
4. All procedures outlined in the Construction Sequence on Sheet W3 of the approved plans shall be followed with particular

care in order to prevent the spread of invasive milfoil species.

5. All dredged material ("spoil material") shall be completely removed from surface waters, shall be deposited outside of the DES Wetlands Bureau jurisdiction and at least 250 ft. from any surface water or wetland in order to prevent the spread of invasive milfoil species.

6. All construction related debris shall be completely removed from surface waters and deposited outside of the DES Wetlands Bureau jurisdiction.

7. Equipment initially entering surface waters shall be completely free of any imported aquatic plants and animals.

8. Equipment washing/rinsing shall not take place in areas in Wetlands Bureau jurisdictional areas.

9. Appropriate siltation,

erosion, and turbidity controls shall be in place prior to construction, shall be maintained during construction, and shall remain in place until the area is stabilized.

10. The ramp approach shall be crowned so that drainage is directed away from the slope of the ramp.

11. The cofferdam shall be constructed prior to commencing work on structures located within surface waters.

12. The temporary cofferdam shall be entirely removed immediately following construction.

13. The work authorized is also contingent on approval by the DES Alteration of Terrain Bureau.

14. This permit shall not be effective until it has been recorded with the Belknap County Registry of Deeds office by the Permittee. A copy of the recorded permit shall be submitted to the DES Wetlands Bureau by certified mail, return receipt requested, prior to construction.

15. Work shall be conducted in a manner so as to minimize turbidity and sedimentation to surface waters and wetlands.

16. Work shall be conducted in a manner that avoids discharges of sediments to fish spawning areas.

17. Rip-rap shall be located landward of the shoreline at the normal high water, where practical, and shall not extend more than 2 ft. lakeward of that line at any point.

18. Culvert outlets shall be properly rip rapped.

19. All activities shall be in accordance with the Shoreland Water Quality Protection Act, RSA 483-B. The owner is responsible for obtaining any Shoreland Permit that may be required per RSA 483-B, for construction, excavation or fill that will occur within the Protected Shoreland.

With Findings:

1. The owner, authorized agent or applicant certifies that this permit qualifies for a permit extension in accordance with RSA 482-A:3, XIV-a(a), and Env-Wt 502.01.

2. This permit has been extended in accordance with RSA 482-A:3, XIV-a(a) and Env-Wt 502.01.

-Send to Governor and Executive Council-

2017-02321

EFFINGHAM, TOWN OF

EFFINGHAM SOUTH RIVER

Requested Action:

An amendment request received on January 13, 2020 requested to remove four (4) existing 6 foot diameter x 24 foot long CMP culverts and replace with a 46 foot long x 24 foot wide single span bridge within the same general footprint resulting in a decrease of wetland impacts by 1,374 square feet.

APPROVE AMENDMENT

Dredge and fill a total of 1,114 square feet of surface waters and banks for the removal of four (4) existing 6 foot diameter x 24 feet long CMP culverts and replace with a 46 foot long x 24 foot wide single span bridge within the same general footprint.

With Conditions:

1. AMENDED: All work shall be in accordance with plans by HEB Engineers, Inc. dated December 10, 2019 as received by the NH Department of Environmental Services (NHDES) on January 13, 2020.

2. Construction shall be inspected by a qualified wetland scientist, erosion control specialist, or professional engineer to insure that appropriate protective measures are properly implemented, including those outlined in the plans and documents supporting this permit application and the conditions of this authorization.

3. The applicant shall notify NHDES Wetlands Bureau in writing within twenty-four (24) hours of an erosion event resulting in

sediment entering a wetland or surface water.

4. Appropriate turbidity controls shall be installed prior to construction, shall be maintained during construction such that no turbidity escapes the immediate dredge area, and shall remain until suspended particles have settled and the water at the work site has returned to normal clarity.
5. Construction equipment shall not be located within surface waters.
6. Dredged materials, whether to be stockpiled or disposed of, shall be dewatered in sedimentation basins lined with siltation and erosion controls, and located outside of areas subject to RSA 482-A jurisdiction.
7. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; c) set back as far as possible from wetlands and surface waters, with a preferred undisturbed vegetated buffer of at least 50 feet and a minimum undisturbed vegetative buffer of 20 feet.
8. Temporary work areas shall be restored to original condition upon completion of work.
9. Any further alteration of areas on these properties that are within the jurisdiction of the NHDES Wetlands Bureau will require a new application and further permitting by the Bureau.
10. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and remain in place until the area is stabilized. Silt fence(s) must be removed once the area is stabilized.
11. Within three days of final grading or temporary suspension of work, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
12. The contractor responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
13. Construction equipment shall be inspected daily for leaking fuel, oil and hydraulic fluid prior to entering surface waters or wetlands.
14. Faulty equipment shall be repaired prior to entering jurisdictional areas.
15. The contractor shall have appropriate oil spill kits on site and readily accessible at all times during construction and each operator shall be trained in its use.
16. All refueling of equipment shall occur outside of surface waters or wetlands.

With Findings:

1. This is a major impact project per administrative rule Env-Wt 303.02(p), any project that includes a new or replacement stream crossing which meets the criteria for a Tier 3 stream crossing as specified in administrative rule Env-Wt 904.04(a).
2. The applicant has demonstrated that the existing bridge is deteriorating and needs to be replaced. Further, the existing bridge (NHDOT Bridge #165/112) is currently on the NHDOT Municipal Red List as structurally deficient and in poor condition.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per administrative rule Env-Wt 302.03. The proposed replacement bridge will be constructed as a single span within the same general footprint and alignment as the existing bridge.
4. The applicant has demonstrated by plan and example that each factor listed in administrative rule Env-Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.
5. The Natural Heritage Bureau (NHB) has record of a sensitive natural community within the project vicinity, but NHB does not expect impacts to the natural community by the project.
6. The applicant's agent has designed the stream crossing in accordance with NHDES Tier 3 Stream Crossings pursuant to administrative rule Env-Wt 904.04 and Env-Wt 904.05. The proposed design is a span structure, accommodates the 100-year frequency flood, and will restore and simulate a natural stream channel with the removal of the four existing 6 foot diameter x 24 feet long CMP culverts within the river.
7. Pursuant to administrative rule Env-Wt 904.04(f)(2), compensatory mitigation is not required for this project. The applicant has demonstrated that this replacement of a Tier 3 Stream Crossing met all applicable requirements when originally installed and meets the requirements of administrative rule Env-Wt 904.08.
8. The applicant submitted plans stamped by a NH Licensed Professional Engineer.
9. The Effingham Conservation Commission did not provide comments to NHDES.
10. In correspondence dated January 10, 2020, the permittee requested an amendment to the original permit. The design was modified to increase the length of the bridge from 41 feet to 46 feet resulting in a reduction of 1,374 square feet of wetland impact.
11. In accordance with RSA 482-A:3 XIV (e), the decreased impact does not represent a significant amendment and is not expected to have an adverse impact on the environment so it is therefore approved.

PORTSMOUTH ATLANTIC OCEAN

Requested Action:

Impact a total of 9,100 square feet (SF) of previously developed upland tidal buffer zone and tidal surface water at the Pease Development Authority's Portsmouth Commercial Fish Pier to repair an existing failing seawall, repair existing paved surface, replace an existing floating dock, installation of new fender piles, and repair existing rip rap. Retain approximately 1,000 SF of temporary impact to stabilize the existing failing seawall that was conducted under an Emergency Authorization issued on August 16, 2019.

APPROVE PERMIT

Impact a total of 9,100 square feet (SF) of previously developed upland tidal buffer zone and tidal surface water at the Pease Development Authority's Portsmouth Commercial Fish Pier to repair an existing failing seawall, repair existing paved surface, replace an existing floating dock, installation of new fender piles, and repair existing rip rap. Retain approximately 1,000 SF of temporary impact to stabilize the existing failing seawall that was conducted under an Emergency Authorization issued on August 16, 2019.

With Conditions:

1. All work shall be in accordance with plans by Appledore Marine Engineering, LLC dated December 2019 as received by the NH Department of Environmental Services (NHDES) on February 24, 2020.
2. This permit is not valid and effective until it has been recorded with the Rockingham County Registry of Deeds by the applicant. Prior to starting work under this permit, the permittee shall submit a copy of the recorded permit to the NHDES Wetlands Bureau by certified mail, return receipt requested.
3. Not less than 5 state business days prior to starting work authorized by this permit, the permittee shall notify the NHDES Wetlands Bureau Pease office and the local conservation commission in writing of the date on which work under this permit is expected to start.
4. Any future work in jurisdiction as specified in RSA 482-A on this property will require a new application and approval by the NHDES Wetlands Bureau.
5. No person undertaking any activity shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards in RSA 485-A and New Hampshire Administrative Rule Env-Wq 1700.
6. No work shall occur waterward of the steel sheet piles without first obtaining approval by the NHDES Wetlands Bureau.
7. Work within surface waters shall be done during low tide.
8. Appropriate siltation/erosion/turbidity controls shall be in place prior to construction, shall be maintained during construction, and shall remain in until the area is stabilized.
9. Work shall be conducted in a manner so as to minimize turbidity and sedimentation to surface waters and wetlands.
10. Work shall be conducted in a manner that avoids excessive discharges of sediments to fish spawning areas.
11. All construction-related debris shall be properly disposed of outside of the areas subject to RSA 482-A.
12. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.

With Findings:

1. This is a Major Project per New Hampshire Administrative Rule Env-Wt 303.02(a), projects in sand dunes, tidal wetlands, or bogs, except for the repair of existing structures pursuant to Env-Wt 303.04(v).
2. On August 16, 2019, the applicant obtained Emergency Authorization from the NHDES Wetlands Bureau to temporarily impact tidal surface waters to stabilize the existing failing seawall until such time that funding is secured for a permanent solution.
3. This project is located at the Pease Development Authority - Portsmouth Commercial Fish Pier which supports local fishing operations in the region. The facility provides customers with fuel, bait, ice, and loading equipment; and, is in close proximity to roadway infrastructure to transport fish to market.
4. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the NHDES' jurisdiction per New Hampshire Administrative Rule Env-Wt 302.03.
5. The applicant has demonstrated by plan and example that each factor listed in New Hampshire Administrative Rule Env-Wt 302.04(a) and (c), Requirements for Application Evaluation, has been considered in the design of the project.

6. The applicant will be utilizing a barge and crane to complete construction of the seawall to minimize impacts to the wetland resource.
 7. The NH Natural Heritage Bureau (NHB) reported a sensitive plant species and two sensitive vertebrate species within the project vicinity (NHB19-3781).
 8. In correspondence dated December 2, 2019, the NHB does not have concern that the sensitive plant species will be impacted by the proposed work.
 9. In correspondence dated February 19, 2020, the NH Fish and Game Department does not have concern that the sensitive vertebrate species will be impacted by the proposed work.
 10. In correspondence dated January 13, 2020, the Portsmouth Conservation Commission recommended approval of the project, as proposed.
 11. On March 12, 2020, the NHDES staff field inspection verified that the proposed project is accurately represented in the application plans.
 12. In accordance with RSA 482-A:8, the NHDES finds that the requirements for a public hearing do not apply as the permitted project is not of substantial public interest, and will not have a significant impact on or adversely affect the values of the estuarine resource, as identified under RSA 482-A:1.
- Send to Governor and Executive Council-

2019-03434

TOWN OF SANDWICH

SANDWICH BEARCAMP RIVER

Requested Action:

Dredge and fill 224 square feet (SF) within the bed and banks of the Bearcamp River (tier 3, impacting 40 linear feet [LF]) and palustrine forested and scrub-shrub wetland in order to replace an existing 20-foot span bridge with a 33-foot span bridge. In addition, temporarily impact 1,831 SF within the bed and banks of the Bearcamp River (tier 3, impacting approximately 150 LF) and palustrine forested and scrub-shrub wetland for erosion, sedimentation, turbidity controls, and construction access; and restore approximately 458 SF of stream bed within the increased bridge span.

APPROVE PERMIT

Dredge and fill 224 square feet (SF) within the bed and banks of the Bearcamp River (tier 3, impacting 40 linear feet [LF]) and palustrine forested and scrub-shrub wetland in order to replace an existing 20-foot span bridge with a 33-foot span bridge. In addition, temporarily impact 1,831 SF within the bed and banks of the Bearcamp River (tier 3, impacting approximately 150 LF) and palustrine forested and scrub-shrub wetland for erosion, sedimentation, turbidity controls, and construction access; and restore approximately 458 SF of stream bed within the increased bridge span.

With Conditions:

1. All work shall be in accordance with plans by Moser Engineering, dated August 2019, and revised through February 06, 2020, as received by the NH Department of Environmental Services (NHDES) on February 11, 2020.
2. If the dewatering and diversion plan is altered from the approved plan, this permit is not valid until the permittee or permittee's contractors submit a final construction sequence and dewatering and diversion plan to the NHDES Wetlands Bureau for review and written approval. The plan shall include the relative timing and progression of all work and all proposed cofferdams, diversion and dewatering strategies, estimated maximum flow to be diverted, site stabilization provisions if capacity of diversion is exceeded, and measures to reduce turbidity and erosion. This plan shall be stamped by a licensed Professional Engineer (PE), in accordance with New Hampshire Administrative Rule Env-Wt 303.04(I).
3. Not less than 5 state business days prior to starting the work authorized by this permit, the permittee shall notify the NHDES Wetlands Bureau and the local conservation commission in writing of the date on which work under this permit is expected to start.
4. No person undertaking any activity shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards in RSA 485-A and NH Administrative Rules Env-Wq 1700.
5. Any further alteration of areas on this property that are subject to RSA 482-A jurisdiction will require a new application and further permitting.
6. Work shall be done during low flow and in dry conditions.
7. Appropriate siltation and erosion controls shall be in place prior to construction, shall be maintained during construction, and shall remain in place until the area is stabilized. Temporary controls shall be removed once the area has been stabilized.
8. Appropriate turbidity controls shall be installed prior to construction, shall be maintained during construction such that no

turbidity escapes the immediate dredge area, and shall remain in place until suspended particles have settled and water at the work site has returned to normal clarity.

9. Erosion control products shall be installed per manufacturers recommended specifications.

10. Work shall be conducted in a manner so as to minimize turbidity and sedimentation to surface waters and wetlands.

11. All dredged and excavated material and construction-related debris shall be placed outside of the areas subject to RSA 482-A. Any spoil material deposited within 250 feet of any surface water shall comply with RSA 483-B.

12. The contractor responsible for completion of the work shall use techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).

13. Prior to commencing work on a substructure located within surface waters, the permittee or permittee's contractors shall construct a cofferdam to isolate the substructure work area from the surface waters.

14. Cofferdams shall not be installed during periods of high flow, whether due to seasonal runoff or precipitation. Once the cofferdam is fully effective, confined work can proceed without restriction.

15. Work within the stream, inclusive of work associated with installation of a cofferdam, shall be done during periods of low flow only. The permittee shall monitor local weather forecasts to avoid working during or following precipitation events.

16. Discharge from dewatering of work areas shall be to sedimentation basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; c) set back as far as possible from wetlands and surface waters, preferably with an undisturbed vegetated buffer of at least 50 feet and a minimum undisturbed vegetative buffer of 20 feet.

17. Dredged materials, whether to be stockpiled or disposed of, shall be dewatered in sedimentation basins lined with siltation and erosion controls, and located outside of areas subject to RSA 482-A jurisdiction.

18. The temporary cofferdam shall be entirely removed within 2 days after work within the cofferdam is completed and water has returned to normal clarity.

19. No machinery shall enter the water.

20. No excavation shall be done in flowing water. No construction equipment shall be operated in flowing water.

21. Construction equipment shall be inspected daily for leaking fuel, oil, and hydraulic fluid prior to entering surface waters or wetlands or operating in an area where such fluids could reach groundwater, surface waters, or wetlands.

22. The permittee's contractor shall maintain appropriate oil/diesel fuel spill kits on site that are readily accessible at all times during construction, and shall train each operator in the use of the kits.

23. All refueling of equipment shall occur outside of surface waters or wetlands during construction. Machinery shall be staged and refueled in upland areas only.

24. Faulty equipment shall be repaired immediately prior to entering areas that are subject to RSA 482-A jurisdiction.

25. Native material removed from the streambed during construction shall be stockpiled separately and reused to emulate a natural channel bottom within the new structure, between wing walls, and beyond. Any imported materials used to emulate a natural stream channel surface shall be well-graded and properly sized to match the native material found upstream and downstream of the proposed construction and shall not include angular rip-rap. All stones shall be round, without fractures, and washed in with sand and fines.

26. Any voids in streambed simulation material (including at inlet and outlet ends) shall be filled with well-graded, rounded stones without fractures, and washed in with sand and fines to prevent subsurface flow.

27. The re-created stream channel must maintain a natural and consistent elevation and not impede stream flow or aquatic organism passage.

28. The re-created stream channel shall be constructed to maintain depths and sinuosity consistent with the reference reach during low-flow conditions.

29. Any fill used shall be clean sand, gravel, rock, or other suitable material.

30. Extreme precautions shall be taken within riparian areas to prevent unnecessary removal of vegetation during construction. Areas cleared of vegetation must be revegetated with like native species within three days of the completion of the disturbance.

31. Precautions shall be taken to prevent import or transport of soil or seed stock containing nuisance or invasive species such as oriental bittersweet, knotweed, or glossy buckthorn. The contractor responsible for work shall appropriately address invasive species in accordance with the NHDOT Best Management Practices for Roadside Invasive Plants (2008).

32. The permittee/permittee's contractor shall revegetate the disturbed area with trees, shrubs and ground covers representing the density and species diversity of the existing stand of vegetation removed for this project, exclusive of any invasive or nuisance species, which includes all of their cultivars and varieties listed in Table 3800.1 of the New Hampshire prohibited invasive species list (Agr 3802.01).

33. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tackifiers on slopes less than 3:1 or netting and pinning on slopes steeper than 3:1.

34. A follow-up report including photographs of all stages of construction shall be submitted to the NHDES Wetlands Bureau within 60 days of final site stabilization. NHDES Wetlands Bureau may require subsequent monitoring and corrective measures if NHDES deemed the area inadequately stabilized or restored.

35. If the new crossing fails in the future due to the constricted nature of the crossing location, the permittee shall consider adding additional floodplain culverts in order to better convey floodplain flows, which may require additional wetland permitting.

With Findings:

1. This project is classified as a Major Project per NH Administrative Rule Env-Wt 303.02(p), for a replacement tier 3 crossing comprising an alternative design per NH Administrative Rule Env-Wt 904.09.
2. This project involves the replacement of an existing bridge over the Bearcamp River, a tier 3 stream with a watershed of 8.57 square miles (approximately 5,485 acres), that is in poor condition and on the NHDOT 2018 Municipal Red List.
3. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per NH Administrative Rule Env-Wt 302.03 as the proposed bridge will improve the public safety of this structure, the hydraulic capacity of bridge will increase from a 20-foot span to a 33-foot span and reduce the flow velocity through the stream crossing, and a portion of the stream bed beneath the bridge will be restored thus improving aquatic organism passage.
4. The applicant has demonstrated by plan and example that each factor listed in NH Administrative Rule Env-Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.
5. In accordance with RSA 482-A:8, NHDES finds that the requirements for a public hearing do not apply as the permitted project is not of substantial public interest, and will not have a significant impact on or adversely affect the values of the lacustrine resources, as identified under RSA 482-A:1.
6. The applicant is requesting alternative design as making the crossing 100% geomorphically compatible at this location is impracticable given the level of service this crossing receives. The existing crossing is 20 feet, while average bankfull width is 33 feet. The proposed 32.66-foot span represents a 66% increase in the span distance. Hydraulic capacity of the crossing will increase 101% from 730 cfs to 1530 cfs and hydraulic analysis indicates that the crossing will fully pass the flows of a 100-year frequency flood.
7. As required by NH Administrative Rule Env-Wt 904.09(b), a technical report prepared by Mark Moser, PE, was received by NHDES on October 29, 2019. The report indicates that the proposed stream crossing meets the general design criteria specified in NH Administrative Rule Env-Wt 904.01 and provides evidence that the stream crossing meets the specific design criteria specified in NH Administrative Rule Env-Wt 904.05 to the maximum extent practicable. Therefore, the applicant has met all the requirements for an alternative design for a replacement tier 3 stream crossing per NH Administrative Rule Env-Wt 904.09(d).
8. The need for compensatory mitigation pursuant to Env-Wt 800 was assessed and NHDES determined that compensatory mitigation shall not be required for this project in accordance with NH Administrative Rule Env-Wt 904.04(f)(2).
9. In a letter dated October 21, 2019, and received by NHDES on October 24, 2019, the New Hampshire Department of Historical Resources (DHR) stated that no historic properties will be affected by the proposed project and the bridge to be replaced was recommended "not eligible" on NHDOT's Bridge Inventory (2018).
10. In a review letter dated August 21, 2019, and received by NHDES on October 29, 2019, the Natural Heritage Bureau (NHB) stated that there was no record of a sensitive species located in the vicinity of the project.
11. In a regulatory review dated September 25, 2019, the US Fish and Wildlife Service found that while Northern Long-eared Bats (*Myotis septentrionalis*) were present in the vicinity of the site, there were no critical habitats for this species at this location.
12. In a letter signed and dated October 15, 2019, and received by NHDES on November 12, 2019, the abutting property owners granted the applicant authorization to do the work as described in this application within 20 feet of their property at Sandwich Tax Map #R-8, Lot #59.
13. In a letter signed and dated October 15, 2019, and received by NHDES on November 12, 2019, the abutting property owners granted the applicant authorization to do the work as described in this application within 20 feet of their property at Sandwich Tax Map #R-13, Lot #4.
14. In an email dated March 11, 2020, the NHDES Wetlands Bureau and the authorized agent for the applicant signed a time extension agreement until March 19, 2020, to allow additional time for the applicant to provide the remaining application fee for additional wetland impacts. The additional fee was received by NHDES on March 16, 2020.
15. As of March 16, 2020, no comments of concern have been received by NHDES from abutters or local governing organizations.

MINOR IMPACT PROJECT

2019-03618

PERKINS CABINS INC

HOLDERNESS LITTLE SQUAM LAKE

Requested Action:

Temporarily impact 4,353 square feet of lakebed and bank in order to repair 2215 linear feet of existing stone retaining wall

in-kind along an average of 228 feet of frontage along Little Squam Lake in Holderness,

APPROVE PERMIT

Temporarily impact 4,353 square feet of lakebed and bank in order to repair 2215 linear feet of existing stone retaining wall in-kind along an average of 228 feet of frontage along Little Squam Lake in Holderness,

With Conditions:

1. All work shall be in accordance with plans by Cindy McBournie, Dolbier Property Services, dated September 15, 2019, and revised through March 19, 2020, as received by NHDES on March 19, 2020.
2. All development activities associated with this project shall be conducted in compliance with applicable requirements of RSA 483-B and N.H. Code of Administrative Rules Env-Wq 1400 during and after construction.
3. This permit does not authorize the removal of trees or saplings within the waterfront buffer.
4. Work authorized shall be carried out such that there are no discharges in or to spawning or nursery areas during spawning seasons. Impacts to such areas shall be avoided or minimized to the maximum extent practicable during all other times of the year.
5. Work shall be carried out in a time and manner to avoid disturbances to migratory waterfowl breeding and nesting areas.
6. Appropriate turbidity controls shall be installed prior to construction, shall be maintained during construction such that no turbidity escapes the immediate dredge area and shall remain until suspended particles have settled and water at the work site has returned to normal clarity.
7. Prior to commencing work on a substructure located within surface waters, the permittee or permittee's contractors shall construct a cofferdam to isolate the substructure work area from the surface waters.
8. Cofferdams shall not be installed during periods of high water, whether due to seasonal runoff or precipitation. The permittee shall monitor local weather forecasts to avoid working during or following precipitation events. Once the cofferdam is fully effective, confined work can proceed without restriction.
9. Discharge from dewatering of work areas shall be to sediment basins that are: a) located in uplands; b) lined with hay bales or other acceptable sediment trapping liners; c) set back as far as possible from wetlands and surface waters, with a preferred undisturbed vegetated buffer of at least 50 feet and a minimum undisturbed vegetative buffer of 20 feet.
10. The temporary cofferdam shall be entirely removed within 2 days after work within the cofferdam is completed and water has returned to normal clarity.
11. All construction-related debris shall be placed outside of the areas subject to RSA 482-A.
12. The contractor responsible for completion of the work shall use techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
13. No person undertaking any activity shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards in RSA 485-A and Env-Wq 1700.
14. This permit shall not preclude DES from initiating appropriate action if DES later determines that any of the structures depicted as "existing" on the plans submitted by or on behalf of the permitted were not previously permitted or grandfathered.
15. Work shall be done during low flow and in the dry only.
16. The repairs shall maintain the size, location, and configuration of the pre-existing structures.
17. Only existing rocks that have fallen from the structure(s) shall be used for the repairs. No additional rocks shall be used, whether obtained from the site or brought to the site.
18. The permittee/permittee's contractor shall revegetate the disturbed area with trees, shrubs and ground covers representing the density and species diversity of the existing stand of vegetation removed for this project, exclusive of any invasive or nuisance species.
19. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tackifiers on slopes less than 3:1 or netting and pinning on slopes steeper than 3:1.

With Findings:

1. This is a minor impact project per Administrative Rule Env-Wt 303.03(j) repair or replacement of existing retaining walls that requires work in the water, but that results in no change in height, length, location, or configuration.
2. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per Env-Wt 302.03.
3. The applicant has demonstrated by plan and example that each factor listed in Env-Wt 302.04(a) Requirements for Application Evaluation, has been considered in the design of the project.

2019-03880

PITTSBURG SCHOOL DISTRICT

PITTSBURG

Requested Action:

Dredge and fill a total of 9,687 square feet (SF), including 7,937 SF permanent and 1,750 SF temporary, of palustrine scrub-shrub wetlands to repair an existing snowmobile trail known as Corridor 20.

APPROVE PERMIT

Dredge and fill a total of 9,687 square feet (SF), including 7,937 SF permanent and 1,750 SF temporary, of palustrine scrub-shrub wetlands to repair an existing snowmobile trail known as Corridor 20.

With Conditions:

1. All work shall be in accordance with plans by Beaver Brook Planning and Design, LLC dated December 6, 2019 as received by the NH Department of Environmental Services (NHDES) on December 13, 2019.
2. Temporary impact areas shall be restored to original condition upon completion of work and supervised by a NH certified wetland scientist.
3. Any further alteration of areas on this property that are subject to RSA 482-A jurisdiction will require a new application and further permitting.
4. No person undertaking any activity shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards in RSA 485-A and Env-Wq 1700.
5. Work shall be done during low flow.
6. Appropriate siltation and erosion controls shall be in place prior to construction, shall be maintained during construction, and shall remain until the area is stabilized. Temporary controls shall be removed once the area has been stabilized.
7. The contractor responsible for completion of the work shall use techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
8. Extreme precautions shall be taken within riparian areas to prevent unnecessary removal of vegetation during construction. Areas cleared of vegetation must be revegetated with like native species within three days of the completion of the disturbance.
9. Dredged materials, whether to be stockpiled or disposed of, shall be dewatered in sedimentation basins lined with siltation and erosion controls, and located outside of areas subject to RSA 482-A jurisdiction.
10. Construction equipment shall be inspected daily for leaking fuel, oil, and hydraulic fluid prior to entering surface waters or wetlands or operating in an area where such fluids could reach groundwater, surface waters, or wetlands.
11. The permittee's contractor shall maintain appropriate oil/diesel fuel spill kits on site that are readily accessible at all times during construction, and shall train each operator in the use of the kits.
12. All refueling of equipment shall occur outside of surface waters or wetlands during construction. Machinery shall be staged and refueled in upland areas only.
13. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tackifiers on slopes less than 3:1 or netting and pinning on slopes steeper than 3:1.

With Findings:

1. This is a Minor impact project per New Hampshire Administrative Rule Env-Wt 303.03(h), projects involving less than 20,000 square feet of alteration in the aggregate in nontidal wetlands.
2. The applicant has provided evidence which demonstrates that this proposal is the alternative with the least adverse impact to areas and environments under the department's jurisdiction per New Hampshire Administrative Rule Env-Wt 302.03.
3. The applicant has demonstrated by plan and example that each factor listed in New Hampshire Administrative Rule Env-Wt 302.04(a), Requirements for Application Evaluation, has been considered in the design of the project.
4. The applicant has demonstrated that the existing trail has been used since the mid 1960's including students traveling to and from school by snowmobile as well as many snowmobile enthusiasts.
5. No comments of concern were received by NHDES from abutters or local governing organizations.

6. The Natural Heritage Bureau (NHB) report (NHB19-3949) submitted with the application package stated that there are currently no recorded occurrences for sensitive species near this project area.

2020-00080

ANN G REMUS REVOCABLE TRUST

TUFTONBORO LAKE WINNIPESAUKEE

Requested Action:

Replace two existing 6 foot x 30 foot piling piers connected by a 6 foot x 12 foot walkway in a "U" configuration, install 4 tie-off piles, two 3-pile ice protection clusters, two personal watercraft lifts and a single seasonal boatlift on an average of 307 feet of frontage along Lake Winnepesaukee in Tuftonboro.

APPROVE PERMIT

Replace two existing 6 foot x 30 foot piling piers connected by a 6 foot x 12 foot walkway in a "U" configuration, install 4 tie-off piles, two 3-pile ice protection clusters, two personal watercraft lifts and a single seasonal boatlift on an average of 307 feet of frontage along Lake Winnepesaukee in Tuftonboro.

With Conditions:

1. All work shall be done in accordance with plans by Watermark Marine Construction dated December 31, 2019 and as received by the NH Department of Environmental Services (NHDES) on January 15, 2020 as required pursuant to Env-Wt 307.16.
2. This permit shall not be effective until it has been recorded in the Carrol County Registry of Deeds and a copy of the recorded permit has been provided to the department as required pursuant to RSA 482-A:3, and Env-Wt 314.02.
3. All docking facilities shall be at least 20 feet from the abutting property lines and no watercraft shall be secured to the docking facility such that it crosses over the imaginary extension of the property lines over the surface water as required by RSA 482-A:3, XIII.
4. All watercraft lifts shall be installed in an existing legal boat slip and shall be installed after ice-out and removed prior to ice-in pursuant to Env-Wt 513.21.
5. Any subdivision of the property frontage will require removal of a sufficient portion of the docking structures to comply with the dock size and density requirements in effect at the time of the subdivision as required pursuant to Env-Wt 314.02.
6. Work authorized shall be carried out in accordance with Env-Wt 307 such that appropriate turbidity controls are in place to protect water quality, that no turbidity escapes the immediate dredge area, and that appropriate turbidity controls shall remain until suspended particles have settled and water at the work site has returned to normal clarity.
7. Work shall be carried out in a time and manner to avoid disturbances to migratory waterfowl breeding and nesting areas and such that there are no discharges in or to fish or shellfish spawning or nursery areas during spawning seasons as required pursuant to Env-Wt 307.04. Impacts to such areas shall be avoided or minimized to the maximum extent practicable during all other times of the year.
8. All development activities associated with any project shall be conducted in compliance with applicable requirements of RSA 483-B and Env-Wq 1400 during and after construction as required pursuant to RSA 483-B:3.
9. This permit shall not preclude NHDES from initiating appropriate action if NHDES later determines that any of the structures depicted as "existing" on the plans submitted by or on behalf of the permittee were not previously permitted or grandfathered.

With Findings:

1. The project is classified as a minor impact per Rule Env-Wt 513.25(b), modification of a existing legal docking structure that results in no more than 4 boat slips.
2. The Department finds that the project as proposed and conditioned meets the requirements of RSA 482-A and the Wetlands Program Code of Administrative Rules Chapters Env-Wt 100 - 900. No waivers of RSA 482-A or the Wetlands Program Code of Administrative Rules Chapters Env-Wt 100 - 900 were requested or approved under this permit action.

SHORELAND STANDARD

2015-00635

NH DEPARTMENT OF SAFETY MARINE PATROL

GILFORD LAKE WINNIPESAUKEE

Requested Action:

Request permit time extension to impact 76,252 sq. ft. in order to demolish two existing structures and construct a new larger two story facility. The new building will be placed approximately in the same footprint of the existing Headquarters building. Other site improvements include, reconstructing the existing boat ramp, improving gravel driveway, constructing a new parking area, and pouring concrete generator, dumpster, and transformer pads.

APPROVE TIME EXTENSION

Impact 76,252 sq. ft. in order to demolish two existing structures and construct a new larger two story facility. The new building will be placed approximately in the same footprint of the existing Headquarters building. Other site improvements include, reconstructing the existing boat ramp, improving gravel driveway, constructing a new parking area, and pouring concrete generator, dumpster, and transformer pads.

With Conditions:

1. All work shall be in accordance with plans by Steven J. Smith and Associates dated June 24, 2015 and received by the NH Department of Environmental Services (DES) on June 26, 2015.
2. No more than 83.25% of the area of the lot within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from DES.
3. All activities conducted in association with the completion of this project shall be conducted in a manner that complies with applicable criteria of Administrative Rules Chapter Env-Wq 1400 and RSA 483-B during and after construction.
4. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.
5. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.
6. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Ws 1700 or successor rules in Env-Wq 1700.
7. Any fill used shall be clean sand, gravel, rock, or other suitable material.
8. The individual responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
9. This permit shall not be interpreted as acceptance or approval of any impact that will occur within wetlands jurisdiction regulated under RSA 482-A including all wetlands, surface waters and their banks, the tidal-buffer zone, and sand dunes. The owner is responsible for maintaining compliance with RSA 482-A and Administrative Rules Env-Wt 100 - 900 and obtaining any Wetland Impact Permit that may be required prior to construction, excavation or fill that will occur within Wetlands jurisdiction.

With Findings:

1. The owner, authorized agent or applicant certifies that this permit qualifies for a permit extension in accordance with RSA 483-B:5-b, VI and Env-Wq 1406.19.
2. This permit has been extended in accordance with RSA 483-B:5-b, VI and Env-Wq 1406.19.

2020-00162

LORAX SUSTAINABLE DEVELOPMENT

ROLLINSFORD SALMON FALLS RIVER

Requested Action:

Impact 13,021 square feet of protected shoreland on Lots 19-4 and 19-5 in order to remove the detached garage building, driveway, and parking area to install a drainage system and construct a portion of a shared driveway.

APPROVE PERMIT

Impact 13,021 square feet of protected shoreland on Lots 19-4 and 19-5 in order to remove the detached garage building, driveway, and parking area to install a drainage system and construct a portion of a shared driveway.

With Conditions:

1. All work shall be in accordance with plans by Tritech Engineering Corporation dated January 27, 2020 and received by the NH Department of Environmental Services (NHDES) on January 30, 2020.
2. Orange construction fencing shall be installed at the limits of the temporary impact area as shown on the approved plans prior to the start of work and shall be maintained throughout the project in order to prevent accidental encroachment into areas in which impacts have not been approved.
3. No more than 0.3% of the area of Lot 19-4 and any area of Lot 19-5 within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from NHDES.
4. Native vegetation within an area of at least 1,917 square feet of Lot 19-4 and 139 square feet of Lot 19-5 within the Woodland Buffer located between 50 and 150 feet landward of the reference line shall be retained in an unaltered state in order to comply with RSA 483-B:9, V, (b), (2).
5. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.
6. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.
7. Avoid the use of welded plastic or biodegradable plastic netting or thread in erosion control matting.
8. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Wq 1700.
9. Any fill used shall be clean sand, gravel, rock, or other suitable material.
10. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
11. The individual responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
12. This permit shall not be interpreted as acceptance or approval of any impact that will occur within wetlands jurisdiction regulated under RSA 482-A including all wetlands, surface waters and their banks, the tidal-buffer zone, and sand dunes. The owner is responsible for maintaining compliance with RSA 482-A and Administrative Rules Env-Wt 100 - 900 and obtaining any Wetland Impact Permit that may be required prior to construction, excavation or fill that will
13. This permit shall not preclude NHDES from taking any enforcement or revocation action if NHDES later determines that any of the structures depicted as "existing" on the plans submitted by the applicant were not previously permitted or grandfathered.

2020-00280

PSOINOS, CAROLE/MICHAEL

WINDHAM ROCK POND

Requested Action:

Impact 5,000 square feet of protected shoreland in order to construct an attached garage onto the primary structure.

APPROVE PERMIT

Impact 5,000 square feet of protected shoreland in order to construct an attached garage onto the primary structure.

With Conditions:

1. All work shall be in accordance with plans by Meisner Berm Corporation dated February 4, 2020 as revised on March 17, 2020 and received by the NH Department of Environmental Services (NHDES) on March 17, 2020.
2. Orange construction fencing shall be installed at the limits of the temporary impact area as shown on the approved plans prior to the start of work and shall be maintained throughout the project in order to prevent accidental encroachment into areas in which impacts have not been approved.
3. No more than 26.8% of the area of the lot within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from NHDES.
4. Native vegetation within an area of at least 3,237 square feet within the Woodland Buffer located between 50 and 150 feet landward of the reference line shall be retained in an unaltered state in order to comply with RSA 483-B:9, V, (b), (2).
5. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.
6. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.
7. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Wq 1700.
8. Any fill used shall be clean sand, gravel, rock, or other suitable material.
9. The proposed drip line trench shall be installed and maintained to effectively absorb and infiltrate stormwater.
10. Photographs documenting the construction of the proposed drip line trench shall be submitted to the Department within 30 days of the completion of construction.
11. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
12. The individual responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
13. This permit shall not be interpreted as acceptance or approval of any impact that will occur within wetlands jurisdiction regulated under RSA 482-A including all wetlands, surface waters and their banks, the tidal-buffer zone, and sand dunes. The owner is responsible for maintaining compliance with RSA 482-A and Administrative Rules Env-Wt 100 - 900 and obtaining any Wetland Impact Permit that may be required prior to construction, excavation or fill that will
14. This permit shall not preclude NHDES from taking any enforcement or revocation action if NHDES later determines that any of the structures depicted as "existing" on the plans submitted by the applicant were not previously permitted or grandfathered.

2020-00295

REED, SHAWN

RAYMOND LAMPREY RIVER

Requested Action:

Impact 9,200 square feet of protected shoreland in order to demolish a concrete pad and modify an existing stormwater drainage system. Project will include the construction of an office building, warehouse, parking lot, and garage with portions impacts within the protected shoreland.

APPROVE PERMIT

Impact 9,200 square feet of protected shoreland in order to demolish a concrete pad and modify an existing stormwater drainage system. Project will include the construction of an office building, warehouse, parking lot, and garage with portions

impacts within the protected shoreland.

With Conditions:

1. All work shall be in accordance with plans by Jones & Beach Engineers, Inc. dated February 10, 2020 and received by the NH Department of Environmental Services (NHDES) on February 20, 2020.
2. Orange construction fencing shall be installed at the limits of the temporary impact area as shown on the approved plans prior to the start of work and shall be maintained throughout the project in order to prevent accidental encroachment into areas in which impacts have not been approved.
3. No more than 61.7% of the area of the lot within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from NHDES.
4. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.
5. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.
6. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Wq 1700.
7. Any fill used shall be clean sand, gravel, rock, or other suitable material.
8. The proposed (stormwater management structures) shall be installed and maintained to effectively absorb and infiltrate stormwater.
9. Photographs documenting the construction of the proposed (stormwater management structures) shall be submitted to the Department prior to any party taking up occupancy of the new residential primary structure.
10. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
11. The individual responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
12. This permit shall not preclude NHDES from taking any enforcement or revocation action if NHDES later determines that any of the structures depicted as "existing" on the plans submitted by the applicant were not previously permitted or grandfathered.

2020-00298

BELANGER, DAVID/MARCELLE

RINDGE CONTOOCOOK LAKE

Requested Action:

Applicant requests an after the fact approval to retain 264 square feet of impact to the protected shoreland in order to construct an addition to the primary structure.

APPROVE AFTER THE FACT

Retain 264 square feet of impact to the protected shoreland in order to construct an addition to the primary structure.

With Conditions:

1. Structures shall be retained as depicted on plans by Fieldstone Land Consultants, PLLC dated January 7, 2020 and received by the NH Department of Environmental Services (NHDES) on February 20, 2020.
2. No more than 9.8% of the area of the lot within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from NHDES.
3. All exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
4. The individual responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
5. This permit shall not be interpreted as acceptance or approval of any impact that occurred within wetlands jurisdiction regulated under RSA 482-A including all wetlands, surface waters and their banks, the tidal-buffer zone, and sand dunes. The owner is responsible for maintaining compliance with RSA 482-A and Administrative Rules Env-Wt 100 - 900 and obtaining any Wetland Impact Permit that may be required prior to construction, excavation or fill that will occur within

Wetlands jurisdiction.

6. This permit shall not preclude NHDES from taking any enforcement or revocation action if NHDES later determines that any of the other structures depicted as "existing" on the plans submitted by the applicant were not previously permitted or grandfathered.

With Findings:

1. The project property is located within 1/4 mile of the Designated River areas of the Contoocook River and the North Branch River.
2. The Local River Management Advisory Committee (LAC) determined via email on March 18, 2020 that no natural mature vegetation was lost and therefore had no comment.

2020-00302

TULLEY, MARK

ALTON LAKE WINNIPESAUKEE

Requested Action:

Impact 7,352 square feet of protected shoreland in order to build a garage with a new driveway, install drip edges, septic system and porous patio. Remove an existing septic tank, expand the patio under the existing second story porch by removing the retaining wall and install porous pavement in gravel parking area for new driveway.

APPROVE PERMIT

Impact 7,352 square feet of protected shoreland in order to build a garage with a new driveway, install drip edges, septic system and porous patio. Remove an existing septic tank, expand the patio under the existing second story porch by removing the retaining wall and install porous pavement in gravel parking area for new driveway.

With Conditions:

1. All work shall be in accordance with plans by Varney Engineering, LLC dated February 6, 2020 and received by the NH Department of Environmental Services (NHDES) on February 23, 2020.
2. This permit is contingent on approval by the DES Subsurface Systems Bureau.
3. Orange construction fencing shall be installed at the limits of the temporary impact area as shown on the approved plans prior to the start of work and shall be maintained throughout the project in order to prevent accidental encroachment into areas in which impacts have not been approved.
4. No more than 29.4% of the area of the lot within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from NHDES.
5. Native vegetation within an area of at least 1,383 square feet within the Natural Woodland Buffer located between 50 and 150 feet landward of the reference line shall be retained in an unaltered state in order to comply with RSA 483-B:9, V, (b), (2).
6. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.
7. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.
8. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Wq 1700.
9. Any fill used shall be clean sand, gravel, rock, or other suitable material.
10. All pervious technologies used shall be installed and maintained to effectively absorb and infiltrate stormwater.
11. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
12. This permit shall not preclude NHDES from taking any enforcement or revocation action if NHDES later determines that any of the structures depicted as "existing" on the plans submitted by the applicant were not previously permitted or grandfathered.

2020-00303

COHEN, ALICE/RONALD

GILFORD LAKE WINNIPESAUKEE

Requested Action:

Impact 21,675 square feet of Lots 30, 31, and 33 to extend walls, construct walls, demolish a detached garage to construct a carriage house garage, replace a driveway with permeable materials, reconfigure a driveway, vegetate the previous surface, install a driveway apron, construct a patio, and landscaping.

APPROVE PERMIT

Impact 21,675 square feet of Lots 30, 31, and 33 to extend walls, construct walls, demolish a detached garage to construct a carriage house garage, replace a driveway with permeable materials, reconfigure a driveway, vegetate the previous surface, install a driveway apron, construct a patio, and landscaping.

With Conditions:

1. All work shall be in accordance with plans by Terrain Planning & Design, LLC dated February 17, 2020 and received by the NH Department of Environmental Services (NHDES) on February 21, 2020.
2. The proposed carriage house foundation shall not be constructed until any approval as may be required under RSA 485-A and Rules Env-Wq 1000 is obtained from NHDES Subsurface Systems Bureau.
3. Orange construction fencing shall be installed at the limits of the temporary impact area as shown on the approved plans prior to the start of work and shall be maintained throughout the project in order to prevent accidental encroachment into areas in which impacts have not been approved.
4. No more than 24.3% of the area of the Lot 30, 4.8% of the area of the Lot 31, or 15.5% of the area of the Lot 33 within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from NHDES.
5. Native vegetation within an area of at least 1,100 square feet of Lot 30 and 2,580 square feet of Lot 33, within the Woodland Buffer located between 50 and 150 feet landward of the reference line shall be retained in an unaltered state in order to comply with RSA 483-B:9, V, (b), (2).
6. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.
7. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.
8. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Wq 1700.
9. Any fill used shall be clean sand, gravel, rock, or other suitable material.
10. All pervious technologies used shall be installed and maintained to effectively absorb and infiltrate stormwater.
11. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
12. The individual responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
13. This permit shall not be interpreted as acceptance or approval of any impact that will occur within wetlands jurisdiction regulated under RSA 482-A including all wetlands, surface waters and their banks, the tidal-buffer zone, and sand dunes. The owner is responsible for maintaining compliance with RSA 482-A and Administrative Rules Env-Wt 100 - 900 and obtaining any Wetland Impact Permit that may be required prior to construction, excavation or fill that will occur within Wetlands jurisdiction.
14. This permit shall not preclude NHDES from taking any enforcement or revocation action if NHDES later determines that any of the structures depicted as "existing" on the plans submitted by the applicant were not previously permitted or grandfathered.

2020-00312

LAWSON & DOWNEY FAMILY REV TRUST OF 2002

RUMNEY STINSON LAKE

Requested Action:

Impact 3,797 square feet of protected shoreland in order to replace an RV and part of RV pad with a new primary structure. Project includes, grading and construction of retaining walls.

APPROVE PERMIT

Impact 3,797 square feet of protected shoreland in order to replace an RV and part of RV pad with a new primary structure. Project includes, grading and construction of retaining walls.

With Conditions:

1. All work shall be in accordance with plans by B. A. Barnard Ent., Inc. dated February 2020 and received by the NH Department of Environmental Services (NHDES) on February 24, 2020.
2. This permit is contingent on approval by the DES Subsurface Systems Bureau.
3. Orange construction fencing shall be installed at the limits of the temporary impact area as shown on the approved plans prior to the start of work and shall be maintained throughout the project in order to prevent accidental encroachment into areas in which impacts have not been approved.
4. No more than 7.3% of the area of the lot within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from NHDES.
5. Native vegetation within an area of at least 4,947 square feet within the Natural Woodland Buffer located between 50 and 150 feet landward of the reference line shall be retained in an unaltered state in order to comply with RSA 483-B:9, V, (b), (2).
6. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.
7. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.
8. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Wq 1700.
9. Any fill used shall be clean sand, gravel, rock, or other suitable material.
10. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
11. This permit shall not preclude NHDES from taking any enforcement or revocation action if NHDES later determines that any of the structures depicted as "existing" on the plans submitted by the applicant were not previously permitted or grandfathered.

SCOTT, KIMBERLY

PELHAM LITTLE LAKE

Requested Action:

Impact 1,700 square feet of protected shoreland in order to relocate previously approved primary structure further from the reference line, install a new septic system, and install vegetation near the pond.

APPROVE PERMIT

Impact 1,700 square feet of protected shoreland in order to relocate previously approved primary structure further from the reference line, install a new septic system, and install vegetation near the pond.

With Conditions:

1. All work shall be in accordance with plans by V. W. Dingman Consulting dated January 30, 2020 and received by the NH Department of Environmental Services (NHDES) on February 24, 2020.
2. Orange construction fencing shall be installed at the limits of the temporary impact area as shown on the approved plans prior to the start of work and shall be maintained throughout the project in order to prevent accidental encroachment into areas in which impacts have not been approved.
3. No more than 14.3% of the area of the lot within the protected shoreland shall be covered by impervious surfaces unless

additional approval is obtained from NHDES.

4. Native vegetation within an area of at least 2,427 square feet within the Natural Woodland Buffer located between 50 and 150 feet landward of the reference line shall be retained in an unaltered state in order to comply with RSA 483-B:9, V, (b), (2).

5. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.

6. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.

7. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Wq 1700.

8. Any fill used shall be clean sand, gravel, rock, or other suitable material.

9. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.

10. This permit shall not preclude NHDES from taking any enforcement or revocation action if NHDES later determines that any of the structures depicted as "existing" on the plans submitted by the applicant were not previously permitted or grandfathered.

O'HARE ENTERPRISES

WOLFEBORO LAKE WINNIPESAUKEE

Requested Action:

Impact 35,866 square feet of protected shoreland in order to construct a single family home with attached garage, construct a new driveway and walkways, install portions of a new disposal system.

APPROVE PERMIT

Impact 35,866 square feet of protected shoreland in order to construct a single family home with attached garage, construct a new driveway and walkways, install portions of a new disposal system.

With Conditions:

1. All work shall be in accordance with plans by White Mountain Survey & Engineering, Inc. dated February 21, 2020 and received by the NH Department of Environmental Services (NHDES) on February 24, 2020.

2. Neither the new primary structure nor the proposed septic system may be constructed until the system is approved by the NHDES Subsurface Systems Bureau.

3. Orange construction fencing shall be installed at the limits of the temporary impact area as shown on the approved plans prior to the start of work and shall be maintained throughout the project in order to prevent accidental encroachment into areas in which impacts have not been approved.

4. No more than 19.9% of the area of the lot within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from NHDES.

5. Native vegetation within an area of at least 11,440 square feet within the Natural Woodland Buffer located between 50 and 150 feet landward of the reference line shall be retained in an unaltered state in order to comply with RSA 483-B:9, V, (b), (2).

6. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.

7. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.

8. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Wq 1700.

9. Any fill used shall be clean sand, gravel, rock, or other suitable material.

10. All pervious technologies used shall be installed and maintained to effectively absorb and infiltrate stormwater.

11. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.

12. MURRAY, LYNN/THOMAS

WINDHAM CANOBIE LAKE

Requested Action:

Impact 6,350 square feet of protected shoreland in order to raze home at 27 West Shore Road, merge lot with abutting lot at 29 West Shore Road, construct addition to existing home at 29 West Shore along with an attached garage and permeable driveway, construct swimming pool along with drainage and other site improvements.

APPROVE PERMIT

Impact 6,350 square feet of protected shoreland in order to raze home at 27 West Shore Road, merge lot with abutting lot at 29 West Shore Road, construct addition to existing home at 29 West Shore along with an attached garage and permeable driveway, construct swimming pool along with drainage and other site improvements.

With Conditions:

1. All work shall be in accordance with plans by Benchmark Engineering, Inc. dated August 1, 2019 and received by the NH Department of Environmental Services (NHDES) on February 26, 2020.

2. Orange construction fencing shall be installed at the limits of the temporary impact area as shown on the approved plans prior to the start of work and shall be maintained throughout the project in order to prevent accidental encroachment into areas in which impacts have not been approved.

3. No more than 29.6% of the area of the lot within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from NHDES.

4. Native vegetation within an area of at least 80 square feet within the Natural Woodland Buffer located between 50 and 150 feet landward of the reference line shall be retained in an unaltered state in order to comply with RSA 483-B:9, V, (b), (2).

5. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.

6. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.

7. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Wq 1700.

8. Any fill used shall be clean sand, gravel, rock, or other suitable material.

9. The proposed (stormwater management structures) shall be installed and maintained to effectively absorb and infiltrate stormwater.

10. Photographs documenting the construction of the proposed (stormwater management structures) shall be submitted to the Department prior to any party taking up occupancy of the new residential primary structure.

11. All pervious technologies used shall be installed and maintained to effectively absorb and infiltrate stormwater.

12. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface

waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.

13. The individual responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).

14. This permit shall not preclude NHDES from taking any enforcement or revocation action if NHDES later determines that any of the structures depicted as "existing" on the plans submitted by the applicant were not previously permitted or grandfathered.

FITZGERALD, RYAN

BARRINGTON NIPPO POND

Requested Action:

Impact 2,832 square feet of protected shoreland in order to construct a single family home, install individual disposal system, and conduct associated site improvements.

APPROVE PERMIT

Impact 2,832 square feet of protected shoreland in order to construct a single family home, install individual disposal system, and conduct associated site improvements.

With Conditions:

1. All work shall be in accordance with plans by Beaver Brook Planning and Design, LLC dated February 11, 2020 and received by the NH Department of Environmental Services (NHDES) on February 28, 2020.
2. Neither the new primary structure nor the proposed septic system may be constructed until the system is approved by the NHDES Subsurface Systems Bureau.
3. Orange construction fencing shall be installed at the limits of the temporary impact area as shown on the approved plans prior to the start of work and shall be maintained throughout the project in order to prevent accidental encroachment into areas in which impacts have not been approved.
4. No more than 5.5% of the area of the lot within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from NHDES.

03/16/2020 to 03/22/2020

5. Native vegetation within an area of at least 6,538 square feet within the Natural Woodland Buffer located between 50 and 150 feet landward of the reference line shall be retained in an unaltered state in order to comply with RSA 483-B:9, V, (b), (2).
6. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.
7. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.
8. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Wq 1700.
9. Any fill used shall be clean sand, gravel, rock, or other suitable material.
10. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
11. This permit shall not preclude NHDES from taking any enforcement or revocation action if NHDES later determines that any of the structures depicted as "existing" on the plans submitted by the applicant were not previously permitted or grandfathered.

2020-00357

CANAVARI, RUSSELL

EATON CONWAY LAKE

Requested Action:

Impact 31,760 square feet of protected shoreland in order to construct a single family residence with attached garage, and associated driveway, add pathways and perform grading as necessary.

APPROVE PERMIT

Impact 31,760 square feet of protected shoreland in order to construct a single family residence with attached garage, and associated driveway, add pathways and perform grading as necessary.

With Conditions:

1. All work shall be in accordance with plans by Briggs Land Surveying dated February 19, 2020 and received by the NH Department of Environmental Services (NHDES) on February 28, 2020.
2. Neither the new primary structure nor the proposed septic system may be constructed until the system is approved by the NHDES Subsurface Systems Bureau.
3. Orange construction fencing shall be installed at the limits of the temporary impact area as shown on the approved plans prior to the start of work and shall be maintained throughout the project in order to prevent accidental encroachment into areas in which impacts have not been approved.
4. No more than 22.7% of the area of the lot within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from NHDES.
5. Native vegetation within an area of at least 7,332 square feet within the Natural Woodland Buffer located between 50 and 150 feet landward of the reference line shall be retained in an unaltered state in order to comply with RSA 483-B:9, V, (b), (2).
6. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.
7. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.
8. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Wq 1700.
9. Any fill used shall be clean sand, gravel, rock, or other suitable material.
10. The proposed (stormwater management structures) shall be installed and maintained to effectively absorb and infiltrate stormwater.
11. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
12. The individual responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
13. This permit shall not be interpreted as acceptance or approval of any impact that will occur within wetlands jurisdiction regulated under RSA 482-A including all wetlands, surface waters and their banks. The owner is responsible for maintaining

compliance with RSA 482-A and Administrative Rules Env-Wt 100 - 900 and obtaining any Wetland Impact Permit that may be required prior to construction, excavation or fill that will occur within Wetlands jurisdiction.

14. This permit shall not preclude NHDES from taking any enforcement or revocation action if NHDES later determines that any of the structures depicted as "existing" on the plans submitted by the applicant were not previously permitted or grandfathered.

R&T REALTY TRUST

TUFTONBORO MIRROR LAKE

Requested Action:

Impact 4,960 square feet of protected shoreland in order to tear down existing house, replace within the same footprint, construct an addition, expand deck, and install new septic system.

APPROVE PERMIT

Impact 4,960 square feet of protected shoreland in order to tear down existing house, replace within the same footprint, construct an addition, expand deck, and install new septic system.

With Conditions:

1. All work shall be in accordance with plans by Fernstone Associates dated February 17, 2020 and received by the NH Department of Environmental Services (NHDES) on February 28, 2020.
2. Neither the new primary structure nor the proposed septic system may be constructed until the system is approved by the NHDES Subsurface Systems Bureau.
3. Orange construction fencing shall be installed at the limits of the temporary impact area as shown on the approved plans prior to the start of work and shall be maintained throughout the project in order to prevent accidental encroachment into areas in which impacts have not been approved.
4. No more than 26.4% of the area of the lot within the protected shoreland shall be covered by impervious surfaces unless additional approval is obtained from NHDES.
5. Native vegetation within an area of at least 403 square feet within the Natural Woodland Buffer located between 50 and 150 feet landward of the reference line shall be retained in an unaltered state in order to comply with RSA 483-B:9, V, (b), (2).
6. Erosion and siltation control measures shall be installed prior to the start of work, be maintained throughout the project, and remain in place until all disturbed surfaces are stabilized.
7. Erosion and siltation controls shall be appropriate to the size and nature of the project and to the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to wetlands or surface waters.
8. No person undertaking any activity in the protected shoreland shall cause or contribute to, or allow the activity to cause or contribute to, any violations of the surface water quality standards established in Env-Wq 1700.
9. Any fill used shall be clean sand, gravel, rock, or other suitable material.
10. The proposed (stormwater management structures) shall be installed and maintained to effectively absorb and infiltrate stormwater.
11. Photographs documenting the construction of the proposed (stormwater management structures) shall be submitted to the Department prior to any party taking up occupancy of the new residential primary structure.
12. Within three days of final grading or temporary suspension of work in an area that is in or adjacent to wetlands or surface waters, all exposed soil areas shall be stabilized by seeding and mulching during the growing season, or if not within the growing season, by mulching with tack or netting and pinning on slopes steeper than 3:1.
13. The individual responsible for completion of the work shall utilize techniques described in the New Hampshire Stormwater Manual, Volume 3, Erosion and Sediment Controls During Construction (December 2008).
14. This permit shall not preclude NHDES from taking any enforcement or revocation action if NHDES later determines that any of the structures depicted as "existing" on the plans submitted by the applicant were not previously permitted or grandfathered.

2020-00445 ANGELL, PHILIP

(ALL TOWNS) Unnamed Stream

COMPLETE NOTIFICATION
ROUTE 302 & 112, BATH, WILD AMMONOOSUC RIVER

WETLAND PBN

2020-00469 LIBBY MUSEUM - TOWN OF WOLFEBORO

WOLFEBORO LAKE WINNIPESAUKEE

Requested Action:

Impact 2,070 square feet of bank in order to repair an existing 190 linear foot retaining wall and install a 610 square feet native planting bed along frontage on Lake Winnepesaukee in Wolfeboro.

PBN IS COMPLETE

Impact 2,070 square feet of bank in order to repair an existing 190 linear foot retaining wall and install a 610 square feet native planting bed along frontage on Lake Winnepesaukee in Wolfeboro.

With Conditions:

1. All work shall be done in accordance with plans by Belknap Landscape CO. INC., as received by the NH Department of Environmental Services (NHDES) on March 12, 2020 as required pursuant to Env-Wt 307.16.
2. Repair of the existing retaining wall shall be conducted in the dry and shall result in no change in height, length, location, or configuration.
3. Work authorized shall be carried out in accordance with Env-Wt 307 such that appropriate turbidity controls are in place to protect water quality, that no turbidity escapes the immediate dredge area, and that appropriate turbidity controls shall remain until suspended particles have settled and water at the work site has returned to normal clarity.
4. Water quality control measures capable of minimizing erosion; collecting sediment and suspended and floating materials; and filtering fine sediment shall be selected and implemented as appropriate based on the size and nature of the project and the physical characteristics of the site, including slope, soil type, vegetative cover, and proximity to jurisdictional areas as required pursuant to Env-Wt 307.03(c).
5. In accordance with Env-Wt 307.03(a), no activity shall be conducted in such a way as to cause or contribute to any violation of surface water quality standards specified in RSA 485-A:8 or Env-Wq 1700; ambient groundwater quality standards established under RSA 485-C; limitations on activities in a sanitary protective area established under Env-Dw 302.10 or Env-Dw 305.10; or any provision of RSA 485-A, Env-Wq 1000, RSA 483-B, or Env-Wq 1400 that protects water quality.
6. Work shall be carried out in a time and manner to avoid disturbances to migratory waterfowl breeding and nesting areas and such that there are no discharges in or to fish or shellfish spawning or nursery areas during spawning seasons as required pursuant to Env-Wt 307.04. Impacts to such areas shall be avoided or minimized to the maximum extent practicable during all other times of the year
7. All development activities associated with any project shall be conducted in compliance with applicable requirements of RSA 483-B and Env-Wq 1400 during and after construction as required pursuant to RSA 483-B:3.
8. This permit shall not preclude NHDES from initiating appropriate action if NHDES later determines that any of the structures depicted as "existing" on the plans submitted by or on behalf of the permittee were not previously permitted or grandfathered.

With Findings:

1. The project is classified as a minimum impact per Administrative Rule Env-Wt 514.07(a)(3), repair of the existing retaining wall conducted in the dry and result in no change in height, length, location, or configuration.

2020-00496 DATSERAKIS, GEORGE

WAKEFIELD STUMP POND

Requested Action:

Install a 6 foot x 30 foot seasonal pier on 155 linear feet of frontage along Stump Pond in Wakefield.

PBN DISQUALIFIED

Install a 6 foot x 30 foot seasonal pier on 155 linear feet of frontage along Stump Pond in Wakefield.

2020-00568

EUGENE H KOPF REVOCABLE TRUST

MEREDITH LAKE WINNIPESAUKEE

Requested Action:

Repair an existing 6 foot x 53 foot piling pier, two fender pilings and two three-piling ice protection clusters, in-kind, and install two seasonal personal watercraft lifts and a seasonal boatlift on an average of 155 feet of frontage along Lake Winnepesaukee, in Meredith.

PBN IS COMPLETE

Repair an existing 6 foot x 53 foot piling pier, two fender pilings and two three-piling ice protection clusters, in-kind, and install two seasonal personal watercraft lifts and a seasonal boatlift on an average of 155 feet of frontage along Lake Winnepesaukee, in Meredith.

With Conditions:

1. In accordance with Env-Wt 307.16, all work shall be done in accordance with the approved plans dated March 10, 2020 by watermark Marine Construction as received by the NH Department of Environmental Services (NHDES) on March 19, 2020.
2. In accordance with Env-Wt 513.22(a), the docking structure shall be constructed in accordance with the approved plans and specifications. As required by RSA 482-A:3, VI, the permittee shall record, in the Belknap County Registry of Deeds this permit granted under RSA 482-A for the installation, construction, or repair of docking facilities. and the permit shall not be effective until so recorded, in accordance with Env-Wt 314.02(a).
3. In accordance with Env-Wt 307.07, all development activities associated with any project shall be conducted in compliance with applicable requirements of RSA 483-B and Env-Wq 1400 during and after construction.
4. In accordance with Env-Wt 513.10(a) and as required by RSA 482-A:3, XIII(a), all docking facilities shall be at least 20 feet from the abutting property line and the imaginary extension of the property line over the surface water that is perpendicular to the shoreline. In accordance with Env-Wt 513.22(b)(1), the seasonal dock on this lake or pond shall be installed after ice-out and removed prior to ice-in.

With Findings:

1. This is classified as a minimum impact project per Rule Env-Wt 513.24(a)(2), as the project is for repair of an existing legal structure.
